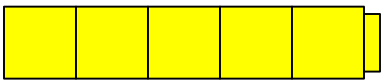
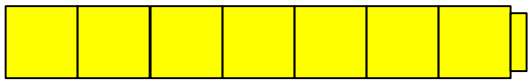
Possible Solutions



= 1. There are 5 cubes in the linked model.

One cube is $\frac{1}{5}$ of the model. Therefore, you need 7 of them to model $\frac{7}{5}$.



$\frac{1}{5} + \frac{1}{5} + \frac{1}{5} + \frac{1}{5} + \frac{1}{5} + \frac{1}{5} + \frac{1}{5} = \frac{7}{5}$
