

Possible Solutions

Use the bar graph to answer the questions and explain your thinking.

- How many flowers are in the garden? $11 + 6 + 3 + 8 = 28$ There are 28 flowers in the garden.
- How many more daisies are there than lilies? $11 - 8 = 3$ There are 3 more daisies than lilies.
- What two flowers could be added together to have the same number of daisies? $8 \text{ lilies} + 3 \text{ roses} = 11 \text{ flowers}$. There are 11 daisies. Lilies and roses together are the same quantity as daisies.
- If you have 3 more roses, how many roses would you have? How would that change the graph? Three more roses would give you 6 roses so the bar would be longer and the same quantity as tulips.
- Write and solve your own word problem about the data in the bar graph.

If Blaine picked all the tulips and roses and put them in a vase, how many flowers would be in the vase? $6 \text{ tulips} + 3 \text{ roses} = 9 \text{ flowers}$. There would be 9 flowers in the vase.
