

Possible Solutions

Maria, Paul, Jose, Mark, Jenny, John, Melissa, and Donna are sharing a pizza at lunch. How could the pizza be split so each person could have an equal share?

Explain how the pizza was shared equally and name the part of the pizza that each friend will eat.

There are 8 friends, so the pizza will be divided into 8 equal pieces or eight-eighths. Each person will get one-eighth or $\frac{1}{8}$ of the pizza to eat.
