

Do parents in your district call asking about the "new Math?"

Do they express their frustration about math homework on social media?

Do they need an accessible resource to help their children with math?

Helping Parents Understand the Math Standards

Math4Texas was developed under the Math Initiative, instituted through the collaborative efforts of the Education Service Center Region 11 board of directors and superintendents, in order to help parents and teachers understand the content and conceptual changes of the revised Math Texas Essential Knowledge & Skills (TEKS) and their impact on students' everyday learning and thinking.

The Math Initiative has three key components to assist parents, students, and teachers not only in ESC Region 11 but in all regions across the state of Texas to be successful in understanding the depth of knowledge that the revised Math TEKS encompass. With that understanding, educators can be confident in their everyday teaching with these new shifts of thinking.

Math4Texas showcases the Math TEKS by grade level with tips, examples, digital tools, and videos to help parents understand the math concepts and skills that their children are learning.

We hope you find the support Math4Texas provides parents is effective in impacting their students' learning.
