

Possible Solutions

Each time you move one place to the left is the same as multiplying the value by ten to get the new value.

$$10 \times 10 = 100 \text{ (hundreds place)}$$

$$100 \times 10 = 1,000 \text{ (one thousands place)}$$

$$1,000 \times 10 = 10,000 \text{ (ten thousands place)}$$

$$10,000 \times 10 = 100,000 \text{ (hundred thousands place)}$$
